

**To: Governor Gavin Newsom, State Superintendent of Public Instruction Tony Thurmond, State Board of Education President Dr. Linda Darling-Hammond, and Manuel Rustin, Chair of the Instructional Quality Commission**

**Re: Support for the draft *Mathematics Framework***

This letter supports the intent and major shifts represented in the first approved draft *Mathematics Framework* and its focus on equity in mathematics education. We, the undersigned, mathematicians, scientists, statisticians, educators, parents, caregivers, advisory groups, and community members, believe in a rich mathematics education that supports all students to succeed in TK–12 mathematics while preparing students for college and career. The current draft Framework challenges longstanding and outdated beliefs and practices and instead recommends research-based approaches that provide access and future success for all students through creating a meaningful and rigorous mathematics experience beginning with early childhood education.

The draft *Mathematics Framework* is being developed in accordance with guidelines approved by the California State Board of Education. The California *Mathematics Framework* development process was intentionally designed as an iterative process to focus on current research and best practices, gather input and feedback from various stakeholders, and respond to and incorporate feedback provided throughout the process ([California Department of Education, 2021](#)).

The purpose of the revised framework is to provide guidance to educators and districts throughout the state as they implement the *California State Standards for Mathematics* ([California State Board of Education, 2013](#)) through instructional practices that support and sustain a culture of access and equity that requires being responsive to students’ backgrounds, experiences, cultural perspectives, traditions, and knowledge ([National Council of Teachers of Mathematics, 2014](#)). The standards, the mathematics to be taught, remain unchanged from those adopted in 2013.

An open letter from The Independent Institute, dated July 2021, was written to Governor Gavin Newsom, State Superintendent Tony Thurmond, the State Board of Education, and the Instructional Quality Commission using unsubstantiated claims to criticize the draft *Mathematics Framework* and urging its replacement, particularly its emphasis on social justice and the inclusion of additional mathematics pathways that enable more students to be successful in mathematics. We vehemently disagree with this open letter and the unfounded claims and false statements it includes regarding the effect the draft *Mathematics Framework* will have on students’ mathematics understanding and their success in mathematics.

The open letter states, “A real champion of equity and justice would want all California’s children to learn *actual* math—as in arithmetic, algebra, geometry, trigonometry, and calculus—not an endless river of new pedagogical fads that effectively distort and displace actual math.” This statement illustrates a profound lack of understanding regarding California’s *State Standards for Mathematics* and the role of the *Mathematics Framework*. The standards include arithmetic, algebra, geometry, trigonometry, and calculus, as adopted by the SBE in 2013 ([California State Board of Education, 2013](#)). We value the role that mathematics can play in highlighting and ultimately addressing social injustice and reject the idea that mathematics should be removed from discussions of inequality. The draft *Mathematics Framework* offers ways for all students to have access to learning rigorous mathematics through many ways, including connections to other disciplines, bringing in students’ experiences, and connecting to their communities and the world.

The open letter represents a narrow view of mathematics, where the teacher and the textbook are the sole authority, and learning is focused on transmitting information from the teacher to the students (Freire, 1970; Lampert, 1990). This view of mathematics does not reflect the existing research, and it systematically acts as an unnecessary gatekeeper that denies many students access to rigorous mathematics courses that prepare them for career and college. This narrow view and teaching methods informed by it have produced years of data and research that reveal that we are not serving the majority of our students well, especially students of color, students with special needs, students with primary languages that are not English, and students from a variety of different socioeconomic and cultural backgrounds (“California School Dashboard,” 2017; Martin, 2006; Zavala, 2014). Currently, less than half of our California students satisfy the A-G requirements, thus limiting their choices and opportunities for college and career (California Department of Education et al., 2019; Xie, 2019). Many of the shifts in the draft *Mathematics Framework* are in direct response to the marginalization many students in California have had, and continue to face, in mathematics.

In contrast, the draft *Mathematics Framework* provides guidance and support based on current research promoting inclusive approaches in teaching mathematics to meet the needs of all students. The draft *Mathematics Framework* embraces a multidimensional view of mathematics that values multiple strategies, emphasizes connections between ideas, and engages students in learning through making conjectures, exploring mathematical properties, explaining their reasoning, validating assertions, and discussing and questioning their thinking and the thinking of others (Lampert, 1990). This broad, engaging, and inclusive view of mathematics increases student access to college- and career-preparatory courses. It supports a modernized mathematics sequence which offers multiple pathways that provide mathematically rich and rigorous options for students, that are “personally and socially relevant, and that enable students to move across pathways as their interests and aspirations evolve . . .” (Charles A. Dana Center, 2020).

While the open letter states, “Mathematics is a discipline whose language is universally accessible with good teaching,” it promotes a return to teaching strategies that perpetuate the long history of replicating the damaging patterns of who belongs and what counts as mathematics (Meyer, 2019). On the other hand, the draft *Mathematics Framework* ambitiously advocates for a rigorous mathematics education experience that provides all students with:

- content that expands views about what mathematics is, how it is vital to their lives, and why they should learn it,
- a pedagogy that provides access for all students to learn rigorous mathematics regardless of race, gender, culture, religion, background, disability, or learning needs, and
- a safe and inclusive learning environment that celebrates the diversity of mathematics and mathematicians.

We, the undersigned, mathematicians, scientists, statisticians, educators, advisory groups, and community members, fully support and respect the aims of the draft *Mathematics Framework*, its use of educational research to guide decision making, and its significant focus on social justice. We reject both the outdated ideas presented in the open letter, their opposition to the critical role of social justice in elevating mathematics learning for all students, and their offensive rejection of the contributions of marginalized people in mathematics. We are in support of the first approved draft *Mathematics Framework* and anticipate the release of the revised chapters and the second sixty-day review period.

In signing this letter, we urge Governor Gavin Newsom, State Superintendent of Public Instruction Tony Thurmond, State Board of Education President Dr. Linda Darling-Hammond, and Manuel Rustin, Chair of the Instructional Quality Commission to listen to mathematicians, scientists, statisticians, educators, parents, caregivers, advisory groups, and community members dedicated to equity and also reject the claims made in the Independent Institute's open letter attempting to preserve a system that does not adequately serve the overwhelming majority of California's students.
